

# ROMPOX® 1080 Thix structured coating

**Solvent free, pigmented, 2 component epoxy/amine resin system**

## 1.0 Areas of application

ROMPOX® 1080 Thix is a lightly structured, solvent free, viscous hard topcoat with high abrasion strength. By mixing in aluminiumoxide (Korund), firedried quartz sand, etc. it is possible to achieve a predefined nonslip level along with good clean capability. ROMPOX® 1080 Thix is used as a structured, rolled coating in production and warehouse areas in the automotive industry, in the electrical and pharmaceutical industry, engineering and factory workshops.

## 2.0 Technical data of liquid components

### 2.1 Technical data

System	2 component EP/amine resin system		
Density (AB) at 23° C	1,49	g/cm <sup>3</sup>	DIN EN ISO 2811-1
Viscosity	thixotrope	mPas	DIN 53019
VOC content	<500	g/l (EU Norm, max. 500 g/l)	EU 2004/42/II/A
Waste disposal key comp. A	08 01 11		acc. to AVV
Waste disposal key comp. B	08 01 11		acc. to AVV
Waste disposal key comp. AB	07 02 13	hardened form	acc. to AVV
GISCODE	RE 1		Bau BG

### 2.2 Delivery form

ROMPOX® 1080 Thix: Two component containers, 30 kg

Components A and B are supplied in a ready to use mixed ratio. Delivery in large or small containers on request.

### 2.3 Storage

In compliance with the regulations and technical rules applying to hazardous substances.

Storage of unopened containers, in cool, dry, frostfree rooms. Ideal storage temperature is approx. 15°C for unopened containers and storage life is 12 months. Temperatures below +10°C and above +35°C should be avoided. After opening, the containers should be used up as soon as possible. Protect contents against moisture. Before use, the material needs to be brought up to ambient temperature.

## 3.0 Technical data for application

### 3.1 Surface requirements before application

The surface must be loadbearing, even, dry and free of oil, grease, separators and dust. Loose particles and other dirt must be removed. In general, the surface should be prepared by shotpeening. In some cases it may be necessary to carry out grinding or milling. The minimum adhesion strength of the surface must be  $\geq 1,5 \text{ N/mm}^2$ . Before coating the surface must be evened out using a primer or scraping filler, in order to achieve an extremely smooth surface. For cement surfaces with residual moisture  $\leq 4 \text{ CM}\%$ , ROMPOX® 1505 is used, for higher residual moisture  $\leq 6 \text{ CM}\%$  use ROMPOX® 1506 and for higher residual moisture  $> 6 \text{ CM}\%$  use ROMPOX® 1504. Highly porous surfaces need to be primed twice! In all cases, it is necessary, that after priming, all pores on the surface are sealed. Metal surfaces should be treated according to the Swedish norm SA 2 ½ acc. to ISO Norm 8501-1 and then primed with ROMPOX® 1101. Due to the numerous variations in surfaces – especially with old coatings – we recommend that a sample coating is laid, in order to eliminate any reactions that cannot be calculated in advance

### 3.2 Technical data for application

Mixing ratio A:B		<b>100 : 20</b>	Weight parts	
Application time at	10° C	<b>35</b>	minutes	ROMEX® - Norm 04
	20° C	<b>18</b>	minutes	ROMEX® - Norm 04
	30° C	<b>12</b>	minutes	ROMEX® - Norm 04
Pot time	23° C	<b>20</b>	minutes	ROMEX® - Norm 04
Min. hardening temperature		<b>+10</b>	°C	Floor and air temperature
Application temperature		<b>15-30</b>	°C	Floor and air temperature
Dewpoint distance		<b>≥3</b>	°C	Floor and air temperature
Air humidity		<b>≤75</b>	%	Relative air humidity

**Please note:** The times mentioned in item 3.2 are approximations and will vary with differing ambient conditions

### 3.3 Application instructions

Component B (hardener) is poured completely into component A (resin). (The B component is thixotrope – scrape out the container completely using a scraper) and stirred well using a slow rotating mixer (approx. 300 rpm diameter of whisk approx. 1/3 of the diameter of the container). Additives (i.e. quartz sand, omyacarb, AlOx (korund)), are always added afterwards and then mixed well for at least 2 minutes. In case of using part measurements (mix A component first, homogenously), these need to be weighed exactly using an electronic scale according to the stated mixing ratio. Mix only the quantity that can be used within the pot time. Do not use straight from the delivery container! Avoid mixing air into mixture. After mixing, pour into a clean container and stir again. ROMPOX® 1080 Thix can be applied using a notched trowel or squeegee, then rolled crosswise using a fur roller and then using a structured platen, whereby the structured texture is created.

**Please note:** In case of surface and material temperatures below +15°C, or when going below the dewpoint distance, levelling and surface faults can occur as well as adhesion problems within the coating system!

ROMPOX® 1080 Thix is systemically a fast reacting material. The top coat should be applied especially at temperatures above 20 degrees with sufficient site occupation and in field widths <20 m. We recommend to halve the delivery packages. This is done with an electronic scale considering the mixing ratio.

### 3.4 Application example

as a lightly structured coating with nonslip classification approx. R10 (approx. 0,86mm layer thickness) on cementbound, normed surface

Work process	Product	Consumption	Application
Surface preparation	-	-	see point 3.1
Primer as scraping filler	ROMPOX® 1505 Primer	min. 0,3 kg/m <sup>2</sup>	Apply using hard rubber squeegee or smoothing trowel, level off sharply
	2 wp firedried quartz sand Ø 0,06-0,3 mm	min. 0,2 kg/m <sup>2</sup>	
	1 wp ROMEX® FG10	min. 0,1 kg/m <sup>2</sup>	
sprinkling if required*	Firedried quartz sand with Ø 0,1 - 0,5 mm	approx. 0,5 kg/m <sup>2</sup>	Sprinkle evenly
Intermediate layer	1 wp ROMPOX® 1505	min. 0,3 kg/m <sup>2</sup>	Flooding with rubber squeegee, then with rollers
Structured coating	ROMPOX® 1080 Thix Structured coating	min. 0,70 kg/m <sup>2</sup>	Apply using notched rubber squeegee (3mm), then use a fur roller crosswise and a (rough) structured roller to finish
	AlOx (Korund) # 36 (approx. 0,42-0,6 mm)	min. 0,042 kg/m <sup>2</sup>	

**3.5 Application example as a lightly structured coating including scraping filler with nonslip classification approx. R10 (> 1,50mm layer thickness) on cementbound surface**

Work process	Product	Consumption	Application
Surface preparation	-	-	see point 3.1
<b>Primer</b>	<b>ROMPOX® 1505</b> Primer	<b>min. 0,3 kg/m<sup>2</sup></b>	Flooding with rubber squeegee and then rollers
sprinkling if required*	Firedried <b>quartz sand</b> with <b>Ø 0,1 - 0,5 mm</b>	approx. 0,5 kg/m <sup>2</sup>	Sprinkle evenly
scraping filler	per 1mm layer thickness <b>1 wp ROMPOX® 1505</b> 1 wp firedried <b>quartz sand Ø 0,06-0,3 mm</b>	<b>min. 0,8 kg/m<sup>2</sup></b> <b>min. 0,8 kg/m<sup>2</sup></b>	Apply using hard rubber squeegee or smoothing trowel, level off sharply
<b>Structured coating</b>	<b>ROMPOX® 1080 Thix</b> Structured coating <b>AlOx (Korund)</b> <b># 36 (approx. 0,42-0,6 mm)</b>	<b>min. 0,70 kg/m<sup>2</sup></b> <b>min. 0,042 kg/m<sup>2</sup></b>	Apply using notched rubber squeegee (3mm), then use a fur roller crosswise and a (rough) structured roller to finish

**3.6 Application example as a lightly structured coating including self leveling Intermediate layer with nonslip classification approx. R10 (> 2, 0 mm layer thickness) on cementbound surface**

Arbeitsgang	Produkt	Verbrauch	Applikation
Surface preparation	-	-	see point 3.1
<b>Primer</b>	<b>ROMPOX® 1505</b> Primer	<b>min. 0,3 kg/m<sup>2</sup></b>	Flooding with rubber squeegee and then rollers
sprinkling if required*	Firedried <b>quartz sand</b> with <b>Ø 0,1 - 0,5 mm</b>	approx. 0,5 kg/m <sup>2</sup>	Sprinkle evenly
scraping filler if required	per 1mm layer thickness <b>1 wp ROMPOX® 1505</b> 1 wp firedried <b>quartz sand Ø 0,06-0,3 mm</b>	<b>min. 0,8 kg/m<sup>2</sup></b> <b>min. 0,8 kg/m<sup>2</sup></b>	Apply using hard rubber squeegee or smoothing trowel, level off sharply
Intermediate layer	<b>ROMPOX® 1080</b> Same Colour as topcoat	min. 1,5 kg/m <sup>2</sup>	Apply with smoothing trowel or notched squeegee
<b>Structured coating</b>	<b>ROMPOX® 1080 Thix</b> Structured coating <b>AlOx (Korund)</b> <b># 36 (approx. 0,42-0,6 mm)</b>	<b>min. 0,70 kg/m<sup>2</sup></b> <b>min. 0,042 kg/m<sup>2</sup></b>	Apply using notched rubber squeegee (3mm), then use a fur roller crosswise and a (rough) structured roller to finish

\* **Note:** When working indoors, sprinkling should be left out, if it is ensured, that subsequent work will take place within 48 hours at the latest. Please take note of ROMEX® technical specifications for coatings and sealants.

*In case of significant colour contrast between the subsurface and topcoat (especially when using bright colours), we recommend adding 10% ROMEX® 700 (same colour as topcoat) to the Intermediate layer. We recommend that a sample coating is laid.*

*If the surface still shows faulty areas after filling with primer, then these need to be evened out using ROMPOX® 1505 mixed with quartz sand (i.e. 0,063 mm-0,3 mm) and/or setting agent (ROMEX® 3200).*

**Please note:** *Depending on ambient temperature, consumption may vary. At temperatures below 15 °C, there will be higher material consumption.*

### 3.8 Cleaning

Each time work is interrupted, clean all tools and equipment with a general solvent (i.e. ethanol, white spirits).

## 4.0 Technical data of hardened product

### 4.1 Technical data of hardened product

Re-application at 23 °C	<b>12-48</b>	min. / max. hrs.	ROMEX® - NORM 07
Can be walked on at 23 °C	<b>14</b>	hrs.	ROMEX® - NORM 07
Fully hardened at 23 °C	<b>&gt;7</b>	days	ROMEX® - NORM 07
Compressive strength:	<b>70</b>	N/mm <sup>2</sup>	DIN EN 1015-11
Bending tensile strength:	<b>30</b>	N/mm <sup>2</sup>	DIN EN 1015-11
Shore-D-Hardness 23 °C	<b>±70</b>	Shore-D	DIN 53505
Abrasion (Taber Abrasion) 1000g/CS10	<b>&lt;40</b>	mg	DIN EN ISO 438-2

### 4.2 Properties of coating

- abrasion resistant floor coating, resistant to forklifts
- viscous hard floor coating
- can be made nonslip
- solvent free
- good chemical resistance (see chemical resistance list ROMPOX® 1080/Thix)
- good cleaning capabilities
- many standard colours available. Special colours on request.

**Different types of AlOx can affect both the appearance and the anti-slip properties of the finished coating. To obtain reproducible results, we recommend that you only order the AlOx from ROMEX®.**

**Note:** *If possible, always use material from the same production batch, especially on visible surfaces, as material from different production batches, may have slightly differing colour nuances. Hardened, liquid plastics are subjected to environmental factors i.e. UV rays and can thus change visually after hardening (i.e. yellowing, loss of gloss, white discolouration). The functioning of the industrial floor is not affected by this and does not constitute a fault. The colours of the products depend on raw materials and production methods and may have slight deviations compared to the RAL colours. It cannot be guaranteed that there will be exact matching of RAL colours.*

## 5.0 Safety instructions

The products contain reactive materials and are partly hazardous to health in a non-hardened state. The hardener components can cause burns due to high alkali content. It can also cause irritation or skin sensitization. Avoid skin contact. If the product does get onto the skin, wash well with soap and water. If the product gets into the eyes, rinse well with water (keep an eye wash bottle on site) and seek medical treatment immediately. The guidelines in the regulations of handling hazardous materials apply as well as information sheets provided by the professional association of the chemical industry (i.e. BG-Bau, BGR 227 „Handling of

epoxy resins"). Exact details on the handling of this product can be found in the safety data sheet for ROMPOX® 1080 Thix, comp. A and B.

## 6.0 Important instructions: CE identification

DIN EN 13 813 "Screed mortars, screed mass and screeds – properties and requirements" (Jan. 2003) sets out requirements for screed mortars that are used for floor construction in interior rooms. Synthetic resin coatings and sealants are also included in this norm. Products that are in accord with the aforementioned norm are to be given the CE identification mark

	
ROMEX® GmbH • Mühlgrabenstr. 21 • D - 53340 Meckenheim	
14 <sup>1)</sup>	
EN 13813 SR-B1,5-AR0,5-IR4	
Synthetic resin screed/coating for interior use in buildings (application according to our technical specifications)	
Effects when burned:	Efl <sup>2)</sup>
Release of corrosive substances (Synthetic Resin Screed):	SR
Water permeability:	NPD <sup>3)</sup>
Abrasion Resistance:	AR0,5 <sup>4)</sup>
Adhesion strength (Bond):	B1,5
Impact Resistance:	IR4
Impact noise insulation:	NPD <sup>3)</sup>
Noise absorption:	NPD <sup>3)</sup>
Thermal insulation:	NPD <sup>3)</sup>
Chemical resistance:	NPD <sup>3)</sup>

The aforementioned information and instructions for application are based on our experience. Due to the numerous types of surface, application methods and physical conditions when using our materials, the information contained in these technical specifications cannot be used to make any legal claims with regard to the guarantee for the results when working with this product. The user himself is solely responsible for the results and must test the suitability of the materials. We reserve the right to make changes to the technical specifications. Only the newest version of the technical specifications is valid and this can be downloaded at [www.romex-ag.de](http://www.romex-ag.de) or requested from us in writing.

### Legend

- 1) the last two numbers of the year in which the CE identification was attached
- 2) in Germany DIN 4102 is still valid; fire class B2 is fulfilled
- 3) NPD = No Performance Determined
- 4) applies to the smooth, non sprinkled coating

### Notes

Our recommendations, which are given to assist buyers & endusers, are based on our experience and correspond to the current levels of knowledge in science and practice, however they are not binding and have no legal force. It is recommended adapting methods and quantities of product to the local needs. If necessary a sample surface should be laid beforehand.
