

For jointing of
**ceramic
slabs**

with water permeable,
bonded construction.

ROMPOX® - D1 ^{PLUS}

The ideal paving joint mortar for ceramic paved stone surfaces

ROMPOX® - D1 ^{plus} is a real specialist for ceramic patio slabs. Ceramic slabs, tiles in natural stone or wood look as well as high-quality natural stone coverings are very trendy. Because in contrast to concrete and natural stones, ceramics are colourfast, more scratch-resistant and less sensitive to dirt. Because ceramic slabs are often only 2 cm thick, when laid outdoors for permanent use, they need to be laid bonded and permeable to water. Thanks to the good flank adhesion, ceramic slabs can be jointed using ROMPOX® - D1 ^{plus} which ensures a durable covering that can easily withstand all weather influences.

usage
category

Properties

- joint widths from 3–8 mm | 1/8"–3/8"
- joint depths from 20 mm | 3/4"
- for ceramic tiles
- best flow capability
- no cement haze / residue
- frost and de-icing salt resistant
- highly water-permeable
- can be applied during drizzle
- no need to cover the area during drizzle

ROMPOX® - D1 ^{PLUS}

The ideal paving joint mortar for ceramic paved stone surfaces

APPLICATION

Construction Site Requirements: The foundation needs to be prepared in bonded construction according to the expected traffic loads. Regulations and leaflets regarding construction of paved stone surfaces should be heeded. Future loads must not cause the surface to settle or loosen stones. Ideally, you would use ROMEX® Trass-Bed products For optimum application it is recommended using ROMEX® application tools.

Preparation: Clean out joints to a depth of at least 20 mm | ¾" (minimum joint width 3 mm | ¼"). With a slab thickness less than 30 mm, bonded laying methods should be used and the whole joint filled completely with ROMPOX® - D1 plus. The surface to be joint-fixed should be cleaned of all impurities before work commences. Adjoining surfaces that are not to be joint-fixed are taped off.

Pre-wet: Pre-wet the surface carefully. Porous surfaces as well as higher surface temperatures, require more intense pre-wetting. Do not let water accumulate in the joints. Avoid the use of too much water.

Mixing: Pour the 25 kg | 55 lbs filler components into the mixing tub and start the mixing process. Whilst mixing, slowly add the separately packaged 1.5 kg | 3.3 lbs resin/hardener component completely into the mixture. In order to fully use the contents of the bottle, both bottles should be rinsed with water. To do this, fill up the two previously emptied resin / hardener bottles with 0.5 litres | 0.13 gal of water, close, shake vigorously and add the contents of the bottle to the mixture. After mixing for 3 minutes add 2 litres | 0.5 gal of water and continue mixing well for at least 3 minutes. Use professional agitator or rotary-drum mixer / compulsory mixer.

Application: Apply the mixed pavement jointing mortar onto the well moistened surface and work it carefully into the joints using a squeegee/rubber slider. The mortar is poured out at three or four spots within the jointing area in order to make best use of the fluidity of the pavement jointing mortar. If the ready mixed mortar is not used up straight away, before continuing with application and remaining within the stated application time, mix the remaining mortar through again briefly to ensure it has optimum flow capability. All tools as well as work shoes should be regularly cleaned with a water spray during jointing, to avoid impurities by binding agent and footprints on the stone surface.

Final cleaning: After approx. 10–15 minutes the excess mortar on the surface of the stones can be swept off carefully with a large, coarse broom. Then use a soft, hair broom to do a final cleaning until all residual mortar has been removed from the surface. The correct moment for sweeping, is when white smears no longer form on the stone surface during sweeping. Sweeping should be done diagonally to the joint. Do not reuse swept off material.

Subsequent treatment: Rain protection is not necessary during drizzle. In case of permanent or heavy rain, the freshly jointed surface should be protected for 12–24 hours. The rain protection layer must not be laid directly onto the paved surface, to ensure sufficient air circulation.

Important note - resin film: During the initial period a very thin film of epoxy resin remains on the stone surface and intensifies the colour of the stone and protects it from dirt. The resin film is temporary and will disappear over time due to weathering and abrasion. In case of uncertainty, a sample surface should be tested before the entire jointing is done. A resin film does not constitute an "application fault" and the quality of the surface is not compromised in any way. For further information please take note of the ROMEX® compendium.

Technical data

Test report, audited colour „neutral“, goods in bags.		
System	2-component epoxy resin	
Compression strength	10,4 N/mm ² 1 508 psi Laboratory value 6,5 N/mm ² 942 psi Building site value	DIN 18555 part 3
Bending tensile strength	5,8 N/mm ² 841 psi Laboratory value 3,6 N/mm ² 522 psi Building site value	DIN 18555 part 3
Static elasticity module	1 370 N/mm ² 198 701 psi Laboratory value 1120 N/mm ² 162 442 psi Building site value	DIN 18555 part 4
Hard mortar raw density	1.68 kg/dm ³ 0.97 oz/in ³ Laboratory value 1.43 kg/dm ³ 0.83 oz/in ³ Building site value	DIN 18555 part 3
Application time at 20 °C 68 °F	20–30 minutes	ROMEX®-norm 04
Application temperature	> 5 °C up to max. 30 °C > 41 °F up to max. 86 °F At lower temperatures slow hardening, at high temperatures quick hardening	
Re-opening of surface at 20 °C 68 °F	after 24 hours can be walked on, after 6 days fully load bearing	
Water permeability coefficient*	7,6 × 10 ⁻⁴ m/s ≙ approx. 2,3 l/min/m ² for a joint fraction of 10 % 107 iph ≙ approx. 0.06 gal/min/sqft for a joint fraction of 10 %	
Storage life	24 months resin/hardener components: frostfree, filler components: dry	

Consumption table in kg/m ² lb/sq ft - Basis of calculation: joint depth Ø 30 mm 1 ¼"							
Joint width	Stone size	90 × 60 cm 35 ¼" × 23 ½"	80 × 80 cm 31 ½" × 31 ½"	60 × 60 cm 23 ½" × 23 ½"	60 × 40 cm 23 ½" × 15 ¾"	40 × 40 cm 15 ¾" × 15 ¾"	30 × 30 cm 11 ¾" × 11 ¾"
	3 mm ⅛" (min.)	0.3 kg 0.7 lbs	0.3 kg 0.7 lbs	0.3 kg 0.7 lbs	0.4 kg 0.9 lbs	0.5 kg 1.1 lbs	0.6 kg 1.3 lbs
